AWS Certified • Achieved 16+ Certificates in ML, DL and NLP Specialization

Education

University of Edinburgh

Bachelor's of Science, Electronics and Computer Science (Upper Second Class)

Sep 2020 – Jul 2024

Help Academy, A-Levels

3A*, 1A (Maths, Further Maths, Chemistry, Physics)

Jan 2019 – Jul 2020

Experience

Pimato

Full Stack Engineer

Nov 2024 – Present

Kuala Lumpur, Malaysia

- Built features on the frontend and backend for Pimato's main platform, a global solution provider developing AI driven solutions to Maxis, Astro, Prudential and HrdCorp.
- Collaborated with the AI and the Full Stack team to build and maintain 20+ AWS Lambda functions written in Python, organized under 5 CloudFormation stacks, integrated with an API Gateway, and monitored with CloudWatch logs for scalable backend performance.
- Led CRM efforts for ESGFlex by liaising directly with a university professor to gather business requirements, understand Malaysian financial client needs, and translate those into actionable product features across our ESGFlex product.
- Collaborated and created REST APIs with AWS Lambda to interface with a TiDB SQL database for Vue.js and Vuetify frontends on Pimato platform collaborating with UI/UX designers for low-level designs to reduce user bounce rate by 20%
- Spearheaded frontend development of DataFlex, an intelligent document analysis platform that extracts structured insights from unstructured PDFs using Amazon Textract. Successfully showcased the project at Malaysia's largest AI Summit, focusing on developing a seamless UI by implementing Vue.js and Vuetify across the website.
- Developed and deployed API endpoints to handle AJAX requests from the frontend, using Postman for testing and debugging API interactions.

Freelance Software Engineer — Find Gyms

Sep 2024 - Nov 2024

Full Stack Engineer

Kuala Lumpur, Malaysia

- Identified 5+ challenges that regular Malaysians experience when using gyms in Malaysia, such as lack of gym equipments, subscription-based gyms are overpriced, and gyms often get too crowded.
- Designed a full-stack web application in collaboration with three partner gyms using Vue.js, Express.js, and PostgreSQL, tailoring each site based on the gym's branding. Conducted feedback sessions with gym owners to identify core functionality and translated them into frontend components using Vue.js and Vuetify.
- Managed API keys and integrated Places and Maps JavaScript APIs from Google Cloud Console to display gym partnership locations on our website.
- Optimized PostgreSQL queries and implemented Redux-based caching, reducing API load times by 20%.
- Independently developed a web scraping pipeline using BeautifulSoup and Selenium to extract unstructured gym data. Built a chatbot hosted on Streamlit using a huggingface ollama model for dynamic Q&A on gym-related data to respond to user queries.

Outlier.AI

Sep 2024 - Dec 2024

LLM QA Engineer

Remote

- Executed structured queries to evaluate LLM responses and provided detailed feedback to refine model accuracy.
- Focused on building better models in image classification (CNN), speech recognition (LSTM, GRU), and NLP, improving the performance of n-gram models and transformers.
- Enhanced LLM performance on specific tasks by generating augmented data using Python, Tensorflow, and scikit-learn for preprocessing and feature engineering.

Projects

Pizza Drone Delivery System | Java, JavaScript, CSS, JUnit

Jan 2023 – Jun 2023

- Produced a solution to the travelling salesman problem by configuring greedy heuristic and Dijkstra's algorithm to search for optimal path of a successful delivery with the fastest routes.
- Applied Object-Oriented Programming (OOP) principles and integrated an O(n) time complexity system which group orders, favoring maximum profit and close proximity.

Technical Skills

Languages

Python, SQL, Java, JavaScript

Frameworks/Libraries

Vue.js, Express.js, Node.js, React, Vuetify, TensorFlow, NumPy, scikit-learn, pandas, Matplotlib

Technologies

Vercel, Render, Flutter, Hugging Face, Git, Docker, MLflow
